

Individual Sweep-Check Hearing Screening

Name: _____ DOB: _____ Age: _____

Name of Screener: _____ Date of Screen: _____

SWEEP-CHECK SCREENING PROTOCOL

1. Instruct and condition each child appropriately for age/grade.
2. Select an ear to be tested first. Set the frequency at 1000 Hz and HTL at 40dB. Present the tone for 1-2 seconds, if the subject responds, lower the hearing level to 25dB.
3. Screen all three frequencies at 25dB; begin screening at 1000 Hz. Complete bilaterally.
4. Identify responses with a "+"; identify no response with a "-."
5. Sequence of tone presentations is numbered 1-3 below.

First Screen

Ear	1	2	3	Results
	1000 Hz	2000 Hz	4000 Hz	
Right				<input type="checkbox"/> Pass <input type="checkbox"/> Extended Recheck
Left				

Failing to response to ONE of the three frequencies in EITHER EAR requires an Extended Recheck. If failure of one frequency occurs when performing the extended recheck, a referral is required.

Extended Recheck

For each of the three frequencies listed, starting at 40 dB, record the lowest level in decibels (dB) at which the child responds. Record the findings for both the right and left ears. A child should be referred to an appropriately licensed professional if any one of the three frequencies is recorded as greater than 25 dB in either ear.

Ear	1	2	3	Results
	1000 Hz	2000 Hz	4000 Hz	
Right	dB	dB	dB	<input type="checkbox"/> Pass <input type="checkbox"/> Fail. Referral is needed.
Left	dB	dB	dB
