HAND SANITIZER PROCEDURE

POLICY: Wash hands before and after client contact, immediately or as soon after removing gloves, and immediately after contact with infectious material.

PROCEDURE:

1. Use the bacterial dispenser solution following each patient encounter.
2. Apply the antiseptic solution generously to both hands.
3. Bring hands together and spread the solution at least two inches above the wrist. Pay particular attention to areas between fingers, around nail beds, and under fingernails.
4. Allow 30 seconds for hands to dry after each cleaning.
